

OUR ENVIRONMENTAL POLICY

Kirchhoff Ireland Ltd. is a first-tier supplier and manufacturer of pressed metal and welded components to the world automotive industry. We are conscious of our responsibility to minimise the environmental impact of our daily activities, and our commitment to this goal is an integral part of our business strategy.

The management at Kirchhoff Ireland Ltd. strives for continuous improvement and a positive environmental approach throughout all our operations by complying with pertinent legislation and staying current with upcoming regulations. We are resolute in our objective to address global environmental concerns by continually assessing our consumption of natural resources, electricity and scrap materials, with a view to reducing levels in each area. We are committed to the prevention of pollution in any form and take seriously the responsibility of waste management, including waste prevention, waste reduction, re-use and recycling.

Through our Environmental Improvement Programs, we have established a framework that identifies and addresses environmental objectives and targets. These programs ensure that our environmental performance is monitored by regular audits and is under consistent review.

Additionally, we provide environmental training to personnel at all levels of the organisation. Each employee and representative of Kirchhoff Ireland Ltd., as well as any individual contracted to carry out work on-site, is made aware of our policy and must conform to our environmental standards.

We accept responsibility to the ecological landscape and natural environs, and are heedful of our visual impact in the management and refurbishment of our buildings. So that our neighbours' concerns are given due consideration, we have in place procedures for processing external complaints on a local level.

Kirchhoff Ireland Ltd. has further demonstrated its commitment by developing a comprehensive Environmental Management System (ISO14001), an accredited environmental standard, which ensures compliance with regulatory guidelines. We pledge to continue to work with our suppliers and customers towards achieving our environmental goals.
